SELIM UYSAL

SOFTWARE ENGINEERING GRADUATE

uys.selim@gmail.com | github.com/SelimUysal | LinkedIn

EDUCATION & HONORS

Atılım University | Ankara, Türkiye
B.Sc. in Software Engineering | Graduated 2025

Honor Certificate, Fall 2023 | Atılım University

SELECTED ACADEMIC & TECHNICAL PROJECTS

AI-Based Object Detection for Autonomous Aerial Vehicles

TEKNOFEST AI in Transportation | SEE AI Team, Co-founder | 2024

- Collaborated on AI-based detection of people, vehicles and landing areas using aerial imagery; investigated visual position estimation from downward-facing cameras and experimented with YOLOv8, YOLOv9 and SAHI.
- Led preparation of the preliminary design report with team contributions. Ranked 11th among 198 teams at the preliminary design evaluation, advanced to the next round and secured TRY 21,917.55 in university project support.

Student Information System — Database Design and Management

CMPE341 | Undergraduate project report | Atılım University | 2024

- Researched user requirements through a survey; designed ER/EER models for students, academic staff, courses and examinations; implemented a relational database and reporting queries using Oracle SQL.

Object-Oriented Software Design and Design Patterns

SE461 | Undergraduate technical report | Atılım University

- Studied SOLID principles, design patterns and common architectural problems; developed illustrative C++ examples and assessed trade-offs affecting modularity, maintainability and software reuse.

SELECTED SOFTWARE PROJECTS

Hayat Rehberi — Multi-Module Web Application

Independent project | React, TypeScript, Tailwind CSS, Vite

- Designed, built and deployed a responsive web application integrating prayer schedules, Quran reading and listening, memorization tools, educational resources, personal progress tracking and search.

Source code | Live application

SELECTED SOFTWARE PROJECTS

Telegram News Automation Bot

Personal project | Puppeteer, Python, JSON

- Automated extraction of article metadata, organized scraped information into JSON, eliminated duplicate postings and published new items to a Telegram channel.

Project demonstration

Video Speed — Chrome Browser Extension

Personal project | JavaScript, Chrome extension APIs

- Developed and published a browser extension for adjusting HTML5 video playback speed.

Chrome Web Store

PROFESSIONAL & TEACHING EXPERIENCE

AYESAŞ | Full-Stack Software Development Intern | *Jul 2024 – Jan 2025*

- Designed and developed a web-based device and component management application, implementing a React interface, Spring Boot REST APIs, a PostgreSQL database and PDF/HTML/JSON export functionality.

Project demonstration

LENTATEK | Embedded Systems Intern | *Sep 2022 – Jun 2024*

- Built Qt-based user interfaces, worked with serial communications and configured Ubuntu development environments for embedded-systems workflows.

DENEYAP Technology Workshops | STEM Instructor | *Approximately 18 months*

- Taught programming, robotics, electronics and introductory IoT to middle- and high-school students; mentored practical projects and competition preparation, and served as a jury member at student project events.

RESEARCH INTERESTS

Applied machine learning; intelligent and autonomous systems; AI-assisted software engineering; software design and quality.

LEADERSHIP & COMMUNITY ENGAGEMENT

Volunteer technology mentor; youth-camp team leader; university student-workshop delegate; eight-month volunteer at Gölbaşı Municipality Umutlu Yaşam Center.

Volunteer portfolio (video)
